

Top Metal Roofers 2013

By Paul Deffenbaugh, Editorial Director, Posted 06/03/2014

The Metal Construction News' Top Metal Roofers for 2013 demonstrates the results of an improving business. Among our leaders, they experienced a 23 percent increase in the square footage of metal roofs installed in 2013 over 2012. That increase was buoyed across the board with only a couple of our leaders showing a decline. In previous years, overall they may have experienced increases in square footage, but it often is undermined by several companies reporting declines. Not in 2013. Only two of the companies reported a decline over 2012, while several others showed vigorous growth.

In conversation with several of these companies, it's clear that the increase is coming from an increase in the number of projects as well as a small increase in the size of the projects. If the industry continues to grow, it will have to do so through more projects.

All of the companies are located in the United States in 2013, and most of the large companies are very strong in their regions but have little national scope.

Of particular interest to follow in future studies will be the consolidation up and down the supply chain. Those companies that are the largest are, increasingly, becoming their own material suppliers, so they control the entire distribution channel and have complete control over the end product. This is a phenomenon that is occurring throughout the building product environment among many product lines.

As capital for investment becomes more readily available, will companies begin to invest in their own plants? Will manufacturers tighten relationships with their best contractors and move to a kind of installed sales program? No matter what the future holds, congratulations to the Top Metal Roofers for 2013 for their sustained success and growth.
